

Maximize Productivity with Supervised Autonomy

Teleo turns any equipment into a supervised autonomous machine. Supervised autonomy **combines remote operations with autonomy** to allow **one operator to control multiple machines** in various locations from the comfort of a remote command center.

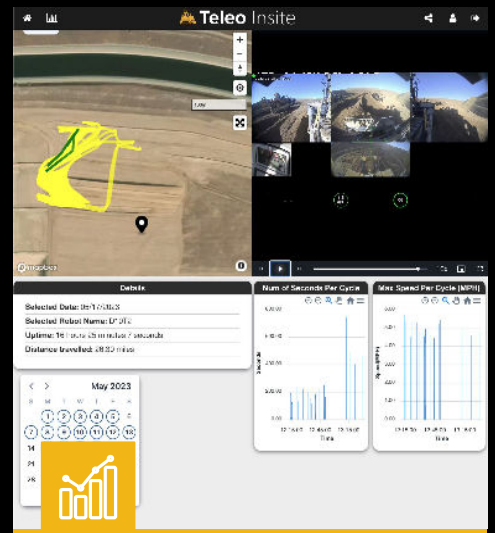

Attract more operators

Expand your pool of operators by providing better, safer, and more comfortable working conditions.

Increase productivity

Get more done by enabling each operator to control multiple pieces of equipment at a time.

Enhance operational visibility

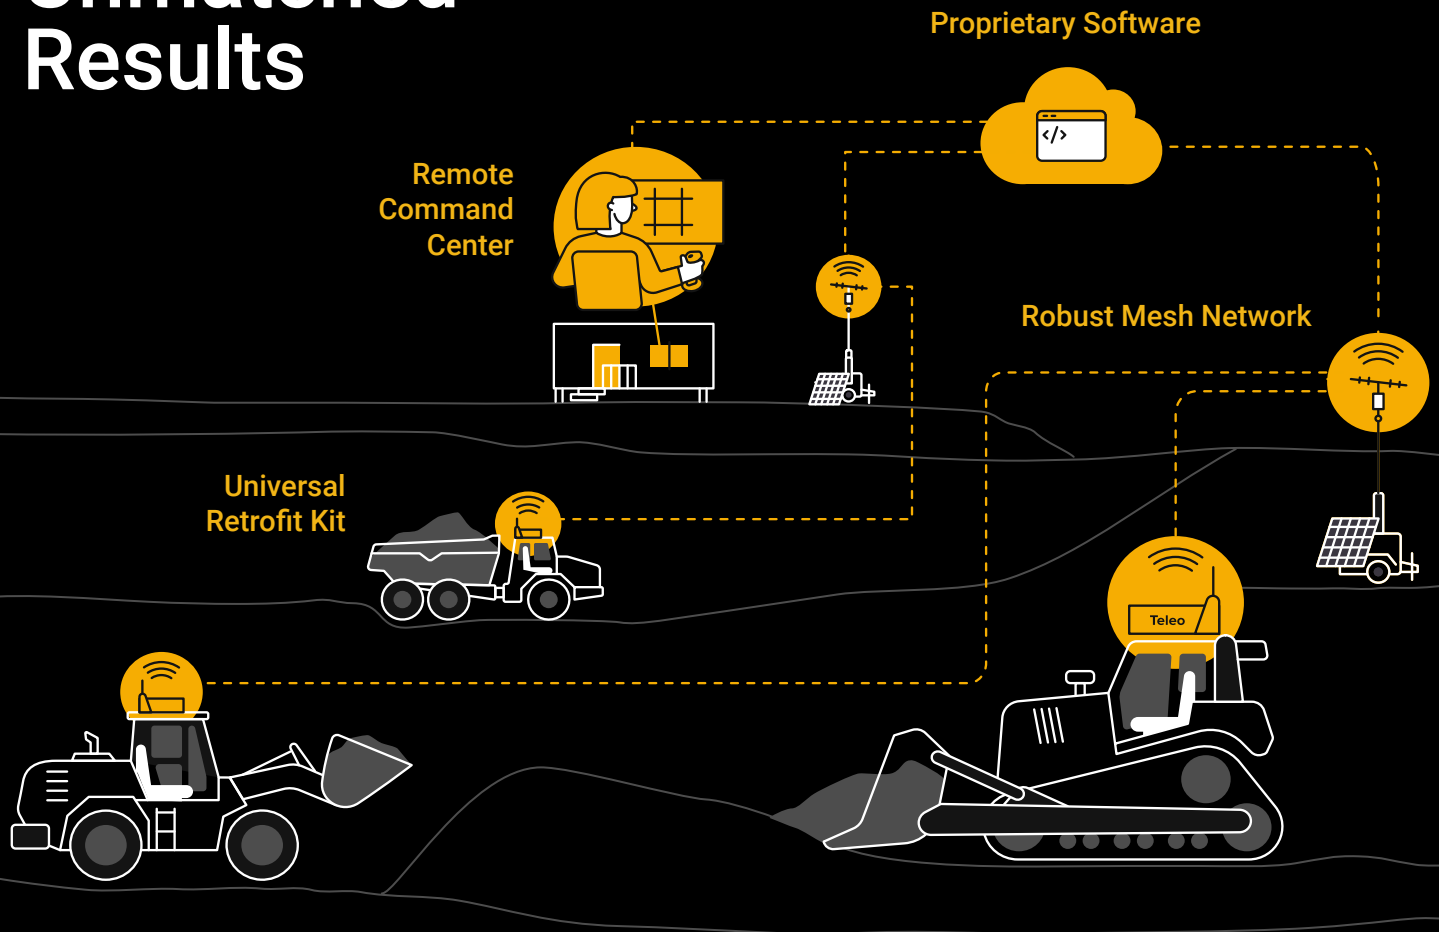

See real-time camera feeds and gain insights to further improve operational performance.

“With Teleo, more people will be attracted to this job because they can run trucks from our office and save hours of drive time to and from job sites. Due to the current labor market, we know going forward we need to do more with less. I believe the Teleo system is the vehicle to make that happen.”

Turn-key solution

Everything you need to turn your equipment into remotely operated and supervised autonomous machines is included.

Any machine

Retrofit any type of equipment from any manufacturer and era – including mixed fleets.

Seamless implementation

Expect easy install, hands-on support, fast operator training, and performance guarantees.
